- Installation (Page 4)
- 
- Setting Up Template (Page 5)
- 
- Additional Info (Page 9)
- 
- Credits (Page 10)

# Introduction.

This template is best suited for creative studios, modern business websites and design agencies. But it can be used for creating personal portfolios, photographers, architects, artists, freelancers and all creative websites.

## **Source Code Built with** [POLYDOM IDE™](#)

This template is designed by hand but source code is produced via 'Polydom IDE' - Designova's natively developed software. This means there will be zero errors on coding as the whole development process is implemented via Polydom IDE software.

## **Powered by Bootstrap**

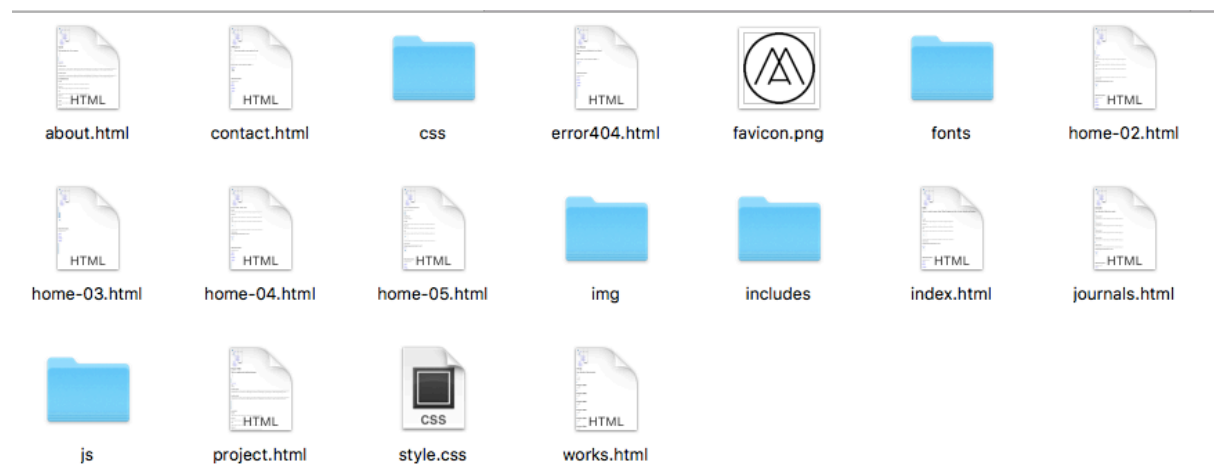

The template is powered by Bootstrap responsive framework. This means, it is thoroughly tested in all modern browsers: Firefox, Safari, Chrome and IE / Edge, also major mobile devices: iOS and Android.

# Installation.

You need to unzip all files and folders from the archive and upload on the web server using your favourite FTP client. Keep the hierarchy as how it come, don't change any file names unless you are experienced in editing web templates. If you see broken layout in the browser, just repair permissions of the template folder (and nested files/folders). "755" is for folders, "644" is for files.

Alternatively, you can work on the template within a localhost server system runs under your computer. If you would like to setup a localhost server, a detailed guide is found here: <https://html5hive.org/how-to-setup-a-localhost/>

Here is the preview of files & directories contained in this template:

# Setting Up Template.

## Editing Content / HTML:

The template contains multiple HTML pages with relevant name strategy. All text content of this website is stored within these HTML files. If you are not familiar working with HTML files, we recommend you to learn the essentials from this tutorial: <https://webdesign.tutsplus.com/tutorials/how-to-customize-an-html-template--cms-25886>

## Navigation Structure:

If you edit the file name of any HTML file, you have to manually modify the same on all HTML files where navigation is active. Navigation can be found here:

```
47 <li>
48 <a href="index.html"><img alt="" title="" class="na
49 </li>
50 <li>
51 <div class="dropdown">
52 <a href="#" class="dropdown-toggle" data-toggle
   Home<span class="caret"></span></a>
   <ul class="dropdown-menu" role="menu">
53 <li>
54 <a href="index.html">Intro Text</a>
55 </li>
56 <li>
57 <a href="home-05.html">Campaign</a>
58 </li>
59 <li>
60 <a href="home-03.html">Portfolio</a>
61 </li>
62 <li>
63 <a href="home-04.html">Fullscreen</a>
64 </li>
65 <li>
66 <a href="home-02.html">Slideshow</a>
67 </li>
68 </ul>
69 </div>
70 </li>
71 <li>
72 <a href="about.html">About</a>
73 </li>
74 <li>
75 <a href="works.html">Works</a>
76 </li>
77 <li>
78 <a href="journals.html">Journals</a>
79 </li>
80 <li>
81 <a href="project.html">Project Info</a>
82 </li>
83 <li>
84 <a href="contact.html">Contact</a>
85 </li>
86 </li>
```

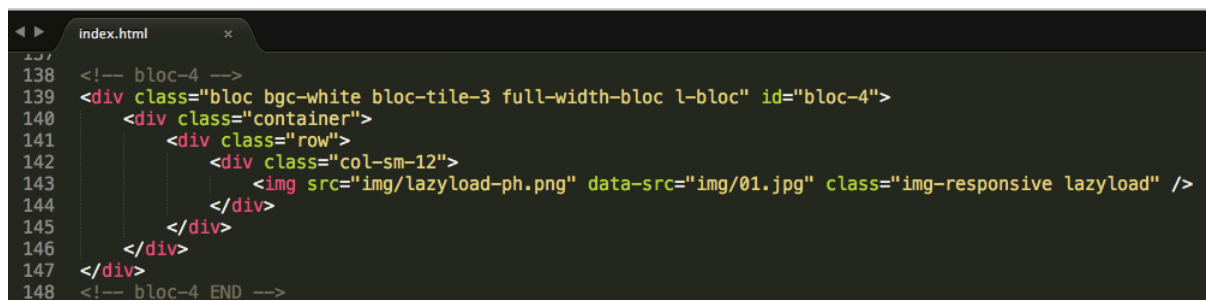

You can set main links as well as inner links (sub navigation) by following the code shown above. It is self explanatory, but please edit any portion precisely.

## Adding / Removing Images:

The template's images and graphics are stored inside 'img' directory. You can find it as: **'[root]/img'**. You can upload your own images in this directory. Always keep an eye on file names and extensions.

In order to set / reset a particular image, you have to locate the page manually, examine the source code and edit the HTML markup that belongs to correct section which contains the image.

For example, home page image block is defined as:

```
138 <!-- bloc-4 -->
139 <div class="bloc bgc-white bloc-tile-3 full-width-bloc l-bloc" id="bloc-4">
140   <div class="container">
141     <div class="row">
142       <div class="col-sm-12">
143         
144       </div>
145     </div>
146   </div>
147 </div>
148 <!-- bloc-4 END -->
```

In order to change the image, you have to set the file name / full URL within **'data-src'** variable.

## Setting Up Carousel / Slideshow:

The template's slideshow / sliders are powered by Carousel plugin. By default carousel slides are set up via HTML markup, for example:

```
<div class="carousel-inner">
  <div class="item active">
    
    <div class="carousel-caption">
    </div>
  </div>
  <div class="item">
    
    <div class="carousel-caption">
    </div>
  </div>
  <div class="item">
    
    <div class="carousel-caption">
    </div>
  </div>
</div>
```

Highlighted portion contains images for each slide item. If you would like to show caption for each slide, you can add the text inside <div> element having class name 'carousel-caption'.

## Setting Up Lightbox & Thumbnail Images:

The template's works page and gallery areas can display thumbnail images which displays Lightbox view of that image when clicked.

You can set the thumbnails as shown below (see highlighted area to replace the image):

```
<a href="#" data-lightbox="img/works/01.jpg" data-frame="fullscreen-lb" data-gallery-id="
gallery-1"></a>
<h6 class="text-center mg-md">
  Project Title
</h6>
<p class="mg-md text-center ">
  Category
</p>
```

You can set the lightbox image as shown below (see highlighted area to replace the image):

```
<a href="#" data-lightbox="img/works/01.jpg" data-frame="fullscreen-lb" data-gallery-id="
gallery-1"></a>
<h6 class="text-center mg-md">
  Project Title
</h6>
<p class="mg-md text-center ">
  Category
</p>
```

You can set the Project Title & Category as shown below (see highlighted area to replace the image):

```
<a href="#" data-lightbox="img/works/01.jpg" data-frame="fullscreen-lb" data-gallery-id="
gallery-1"></a>
<h6 class="text-center mg-md">
  Project Title
</h6>
<p class="mg-md text-center ">
  Category
</p>
```

## Adding / Changing Fonts:

The template's fonts are powered by Google Web Fonts. By default everything is setup for rendering the content in 'Montserrat' and 'Muli' fonts arranged by our designers.

You can change these fonts by following this tutorial: <https://designshack.net/articles/css/a-beginners-guide-to-using-google-web-fonts/>

## Contact Form / Email Setup

The template has a fully working contact form with functionality to send emails via PHP. You have to setup your email address before this functionally activates. In order to set your email, locate the PHP file: '**[root]/includes/form\_1.php**' and locate line #11 and you can see following code:

```
$to = 'receiver@yoursite.com';
```

And edit 'receiver@yoursite.com' to your own email address. The form will work automatically and send the emails to destination address entered by visitors.

# Additional Info

## Scope of This Guide

This documentation is a simple guide suited for users without having any experience in coding, but want to edit content, change images and upload the website.

If you don't have any understanding of HTML, CSS and JS, still you want to customise the template to deeper levels, we recommend you either learn the technologies or get help of an experienced developer.

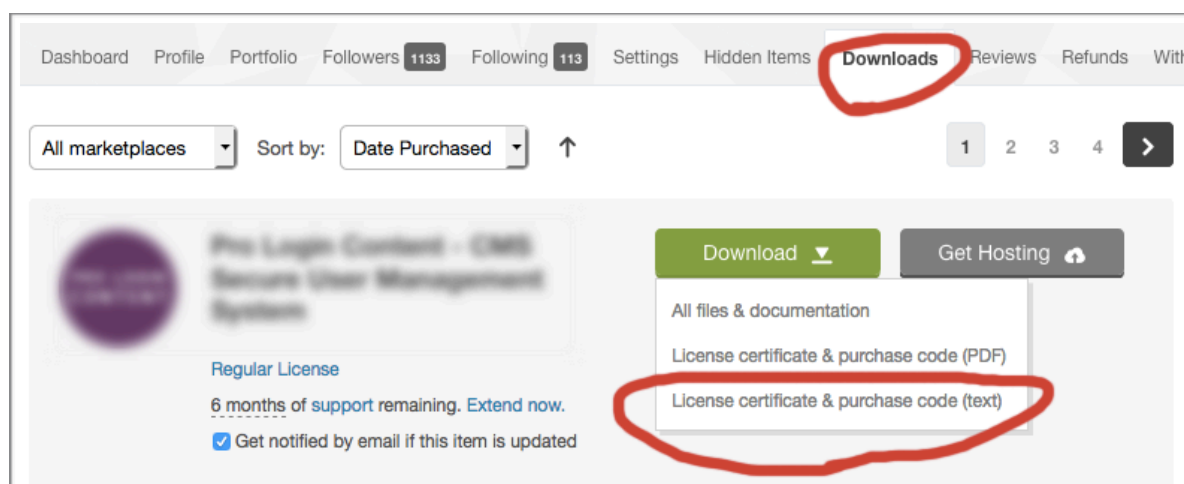

For advanced users, we understand that most of them will have good understanding of HTML, CSS and JS, we recommend following up official documentation found within Bootstrap framework website:

<https://getbootstrap.com/docs/3.3/getting-started/>

## Support

Still if you find any issues or bugs within our template please contact us via our support system: <http://designova.net/support.html>

You will be asked for a purchase code to enter support ticket, you can find it under 'downloads' section within your Themeforest account, example shown below:
